DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 4 and 14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ham III in view of Dacus et al. US 6,223,061.

Ham III discloses a synthesizer (Fig. 5, Para. [0038]-[0040], Abstract) comprising: a phase lock loop circuit (62); a microcontroller (72, 70), coupled to and configured for optimizing a bandwidth characteristic of said phase lock loop over (62) a range of variable output frequencies (output of 76); said microcontroller (72, 70) further configured for carrying out a self-calibration procedure (Figures 7, and see also

Abstract, Figures 7-15 for details) for said phase lock loop; and said self-calibration procedure involving a monitoring of a tune voltage (204, 206 of Fig.7) for a voltage-controlled oscillator (74) and manipulation of inputs (CLOCK IN) into said phase lock loop circuit (62), inputs include a variable loop division ratio (is necessarily present in the CLOCK IN of 64), an integrator (68).

However, Ham III does not explicitly disclose the loop filter having an integrator op-amp, integrator resistor and an integrator capacitor.

As would have been well known in the art as shown in Dacus et al (18, 22, 26), such components in a loop filter make up as an active loop filter for giving better suppression of noise.

Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to use an active loop filter in the PLL of Ham III because such a modification would have provided better suppression of noise.

Response to Arguments

Applicant's arguments filed 6/15/05 have been fully considered but they are not persuasive.

In response to applicant's argument that there is no suggestion to combine the references, the examiner recognizes that obviousness can only be established by combining or modifying the teachings of the prior art to produce the claimed invention where there is some teaching, suggestion, or motivation to do so found either in the references themselves or in the knowledge generally available to one of ordinary skill in the art. See *In re Fine*, 837 F.2d 1071, 5 USPQ2d 1596 (Fed. Cir. 1988) and *In re*

Jones, 958 F.2d 347, 21 USPQ2d 1941 (Fed. Cir. 1992). In this case, an active loop filter as shown in Dacus et al (18, 22, 26), such components in a loop filter make up as an active loop filter for giving better suppression of noise (see Abstract, "the output signal remain stable, with a minimum of frequency drift").

In response to applicant's argument that the examiner's conclusion of obviousness is based upon improper hindsight reasoning, it must be recognized that any judgment on obviousness is in a sense necessarily a reconstruction based upon hindsight reasoning. But so long as it takes into account only knowledge which was within the level of ordinary skill at the time the claimed invention was made, and does not include knowledge gleaned only from the applicant's disclosure, such a reconstruction is proper. See *In re McLaughlin*, 443 F.2d 1392, 170 USPQ 209 (CCPA 1971).

In response to applicant's argument that the precise problem to be solved by the present invention is not squarely addressed by the cited references, the fact that applicant has recognized another advantage which would flow naturally from following the suggestion of the prior art cannot be the basis for patentability when the differences would otherwise be obvious. See *Ex parte Obiaya*, 227 USPQ 58, 60 (Bd. Pat. App. & Inter. 1985).

Allowable Subject Matter

Claim 20 is allowed.

Claims 5-11, 15-19 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The following is a statement of reasons for the indication of allowable subject matter: the best prior art of record, Ham III, taken alone or in combination of other references, does not teach or fairly suggest variable resistance paths.

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Joseph Chang whose telephone number is 571 272-1759. The examiner can normally be reached on Mon-Fri 0700-1730.
